

ARYAN KHURANA

AI Integration Engineer | RAG Systems | LLM Applications

Aryan0711d@gmail.com | +91-8449005969 | [LinkedIn](#) | [aryan0711d](#) | [Aryan Khurana | portfolio](#)

PROFESSIONAL SUMMARY

AI engineer with hands-on experience building production-ready RAG pipelines, LLM-powered applications, and multilingual AI systems. Skilled at integrating large language models, vector databases, and cloud AI services into full-stack architectures that ship. Mentored 150 engineers across 6 batches at Infosys Springboard through end-to-end delivery of IVR, EHR, and Azure speech AI systems.

TECHNICAL SKILLS

AI & LLM:	RAG Pipelines, LLM Integration (Groq, Cohere), Prompt Engineering, Embedding Models, Hybrid Retrieval
Backend:	FastAPI, Python, JWT Auth, bcrypt, Async Programming, REST API Design, Streaming Responses
Databases:	MongoDB Atlas, Vector Search, Atlas Search, Keyword Text Search
Cloud & DevOps:	Azure AI Services, Azure Speech SDK, Azure Cognitive Services, Vercel, Render, Git, GitHub
Frontend & Other:	React, Vite, Real-time Streaming UI, Unity 2D/3D, C#

EXPERIENCE

Infosys Springboard	Aug 2025 – Present
Technical Mentor	
- Led 6 developer batches (150 engineers) through full builds of IVR systems, EHR platforms, multilingual speech-to-speech AI apps spanning 12 languages, and imaging documentation systems via Azure AI services. - Diagnosed a 4-second input latency bottleneck in a real-time speech pipeline and guided 2 batches to reduce it to under 800ms by redesigning sequential STT-translation-TTS processing into a parallelized 4-stage pipeline. - Guided architecture decisions, refactored production codebases, and coached teams on Git, system design, API integration and cloud deployment. Multiple students have publicly credited the mentorship on LinkedIn. - Designed and delivered a real-time multilingual speech streaming pipeline using Azure Speech SDK supporting 12 languages - validated and deployed end-to-end in production.	
HuesFab	Dec 2025 – Mar 2026
Backend Developer Intern	
- Contributed to backend development of a live e-commerce platform - built FastAPI endpoints, implemented authentication system, handled database operations, and contributed to React frontend components. - Optimized API response times by refactoring synchronous database calls to async patterns, reducing average endpoint latency and improving platform reliability under concurrent user load.	
Renu Industries, Haryana	2026
Full Stack Developer (Contract)	
Built a client-side GST tax invoice generator (React + Vite + Python) for a local distributor - auto-calculating CGST/SGST, Indian-format amount in words, PDF export via html2pdf.js, zero backend infrastructure cost, deployed on Vercel.	
Revist Play Studios	2020 – Present
Indie Game Developer	
Shipped multiple Unity 2D/3D titles on Google Play and itch.io. Managed full production pipelines from gameplay systems to platform deployment and post-launch updates.	

KEY PROJECTS

AI Second Brain	FastAPI · Cohere · Groq · MongoDB · React · JWT · Vercel · Render
- Built and deployed a full-stack RAG system with hybrid vector and keyword retrieval, Cohere embeddings, and token-by-token Groq LLM streaming - achieving under 1 second to first token. - Migrated from local sentence-transformers to Cohere API to resolve 512MB memory constraints on Render; resolved production CORS misconfigurations, dependency conflicts, and API integration failures end-to-end. - Implemented JWT auth with per-user data isolation, session-based multi-context chat, and FastAPI async streaming endpoints deployed on Vercel and Render.	
Speech-to-Speech AI System	Azure Speech SDK · Azure Cognitive Services · Python
- Architected a real-time multilingual speech streaming system supporting 12 languages using Azure Speech SDK and Cognitive Services for live translation and synthesis. - Led full delivery from system design through production deployment; used Python evaluation libraries to benchmark and validate latency targets across the pipeline.	
UnityOptimizerPro	C# · Unity Editor · GitHub · Asset Store (Under Review)
One-click Unity editor toolkit bundling occlusion culling, static batching, lighting workflows, and GPU instancing. Open-sourced on GitHub with a public demo on YouTube - currently under review on the Unity Asset Store.
