Portfolio: aryan0711d.github.io/portfolio

PROFESSIONAL SUMMARY

AI engineer with hands-on experience building production-ready RAG pipelines, LLM-powered applications, and multilingual AI systems. Skilled at integrating large language models, vector databases, and cloud AI services into full-stack architectures that actually ship. Mentored 150 engineers across 6 batches at Infosys Springboard through end-to-end delivery of IVR, EHR, and Azure speech AI systems.

TECHNICAL SKILLS

AI & LLM: RAG Pipelines, LLM Integration (Groq, Cohere), Prompt Engineering, Embedding Models, Hybrid Retrieval

Backend: FastAPI, Python, JWT Auth, bcrypt, Async Programming, REST API Design, Streaming Responses

Databases: MongoDB, Vector Search, Atlas Search, Keyword Text Search

Cloud & DevOps: Azure AI Services, Azure Speech SDK, Azure Cognitive Services, Vercel, Render, Git, GitHub

Frontend: React, Real-time Streaming UI

Game Dev: Unity 2D/3D, C#, Gameplay Systems, Performance Optimization, Google Play Publishing

EXPERIENCE

Backend Developer Intern | *HuesFab* | Dec 2025 – Mar 2026

- Contributed to backend development for a live e-commerce platform covering server-side logic, database management, and system integration.

Technical Mentor | *Infosys Springboard* | Aug 2025 – Present

- Led 6 developer batches (150 engineers) through full builds of IVR systems, EHR platforms, multilingual speech-to-speech AI apps spanning 12 languages, and imaging documentation systems via Azure AI services.
- Guided architecture decisions, refactored production codebases, and coached teams on Git, system design, API integration, and cloud deployment. Multiple students have publicly credited the mentorship on LinkedIn.
- Designed and delivered a real-time multilingual speech streaming pipeline using Azure Speech SDK supporting 12 languages - validated and deployed end-to-end in production.

Indie Game Developer | *Revist Play Studios* | 2020 – Present

- Shipped multiple Unity titles — two live on Google Play, two on itch.io. Managed full production pipelines from gameplay systems to platform deployment and post-launch updates.
- Built and open-sourced UnityOptimizerPro, a one-click performance toolkit bundling occlusion culling, GPU instancing, and a visual scene heatmap - currently under review on the Unity Asset Store.

KEY PROJECTS

AI Second Brain *FastAPI · Cohere · Groq · MongoDB · React · JWT · Vercel · Render*

- Designed and deployed a full-stack RAG system live on Vercel and Render with hybrid vector and keyword retrieval, Cohere embeddings, and real-time Groq LLM streaming to a React frontend.
- Implemented JWT and bcrypt auth, FastAPI streaming endpoints, and resolved all production CORS, environment config, and database issues end-to-end.

Speech-to-Speech AI System *Azure Speech SDK · Azure Cognitive Services · Python*

- Architected a real-time multilingual speech streaming system supporting 12 languages using Azure Speech SDK and Cognitive Services for live translation and synthesis. Led full delivery from system design through production deployment.

UnityOptimizerPro *C# · Unity Editor · GitHub · Asset Store (Under Review)* | github.com/aryan0711d/UnityOptimizerPro

- One-click Unity editor toolkit bundling occlusion culling, static batching, lighting workflows, and GPU instancing. Open-sourced on GitHub with a public demo on YouTube — currently under review on the Unity Asset Store.
